

AWS public change alerting is working

Public AWS feeds become explainable, route-scoped review candidates and reach Slack through a durable AWS delivery path.

SLACK MESSAGE

The page's example is generated by the worker code.

The site passes the canonical candidate through `render_message`. Validation fails when the fixture, renderer output, or committed page differs.

Potentially relevant AWS change candidate (medium priority)

Amazon EKS Kubernetes version 1.34 available

<https://aws.amazon.com/about-aws/whats-new/2026/example-eks-update/View source>
Amazon EKS - service-version-update

Amazon EKS now supports Kubernetes version 1.34 in all configured Regions.

The announcement matched the Amazon EKS service definition and the configured service-version-update rule.

Potentially relevant: Acme (acme-prod), Globex (globex-prod), Globex (globex-staging)

Recommended review action: Review supported Kubernetes versions and plan required cluster upgrades.

2026-07-13T12:00:00Z - a9ba064df89aa4365e6fd3e4267c656678b6fcb0605c2044d63f927ad88ee70

Accessible fallback text

In a controlled dev run, the dispatcher queued one public-feed candidate, the worker posted it to Slack, and DynamoDB recorded `posted`.

RENDERER-GENERATED CANONICAL MESSAGE

M1 closed on live delivery and operational evidence

**M2**

Lifecycle, replay, and watcher or dispatcher correctness work

M3

Production policy, rollback proof, recovery objectives, and the final gate

The dev MVP has executable evidence. Production readiness remains an explicit later decision.
